

■ Verification

With the penetration test performed, imbus was able to assess a high level of IT security for the application Kuntze Cloud Connect® Version 2 and firmware version 1.0.7 of the company Kuntze Instruments GmbH.

The approved methods and processes of the „OWASP Web Security Testing Guide v 4.1“ and the „BSI Praxis-Leitfaden IT-Sicherheits-Penetrationstest Version 1.2“ were used to perform the security test.

No critical security gaps were identified, or any security gaps found were satisfactorily remedied by mitigation measures.

This verification is to be understood as a snapshot and can be used towards third parties.

Cologne, 19.08.2021

Tobias Esser
Head of Security Unit
